

DVD Writing and Label Printing From One Device

Written by Marco Attard
01 December 2010

Lite-on announces its iHAS624, a SATA DVD writer with disc labelling options as well as permanent disc erasing.

It writes standard DVDs at 24X, with 12X speeds for double layer discs, 8X for DVD +RW and 6X for DVD-RW. It also carries smart-erase to erase data by overwriting with random characters.

Lite-on says its writer even allows some 16X speed discs to be written at 24X through its fastest writing strategies.

The writer has 2x disc label burning systems-- either Lite-On's own Labeltag or Lightscribe technology.
