

Kodak Presents Photo Printer Dock

Written by Marco Attard
22 June 2017

Kodak announces what it describes as an "easier and more affordable" means to print photographs from smartphones-- the Photo Printer Dock, a device offering one-touch printing from any compatible device.

The Photo Printer Dock is compatible with Android and iOS devices, as well as digital cameras and any other device with USB connection. Printing takes place over either dock or wifi and companion Printer Dock app complete with editing features, filters and stickers.

Actual printing uses fade-resistant 4x6 photo paper and D2T2 4PASS technology featuring a single ink cartridge. The dock can also double as a charger while printing through micro USB port (and additional iOS adapter for iPhone).

The Photo Printer Dock is available now in a package including a 10-photo cartridge and paper pack. Kodak also offers cartridge and paper sets with either 40, 80 or 120 print sheets.
