

Gaming Mouse With BMW Design

Written by Marco Attard
14 March 2012

Thermaltake reveals the Level 10 M Mouse at CeBIT 2012-- a gaming-centric mouse with a design from BMW subsidiary Designworks USA, creators of the 2009 Thermaltake Level 10 PC chassis.

It features a skeletal design and an aluminum base, with an LED-illuminated perforated midsection (supposedly to allow for airflow). The design is also customisable-- the rear is height-adjustable by 5mm and tiltable to either side by 5 degrees.

Included software allows customers to program buttons (all 11 of those), LED colours and tracking sensitivity (ranging from 800 to 8200 DPI).

The mouse will be available in 3 colours (black, white and green), and Thermaltake gives no release date as yet.
