

An Exclamation in PC Speakers

Written by Marco Attard

Edifier goes for punctuation with the e10 Exclaim PC speakers-- a 2.0 channel system with an interesting design similar to the exclamation mark.

Each Exclaim speaker carries an internal amplifier with (combined) 36W RMS of power driving 6 internal active speakers, while 2 passive radiators in the midrange/tweeter housings raise efficiency and dynamic range.

A further 2 supplementary passive radiators augment deep bass and woofer performance.

The speakers also include full integral DSP and DRC providing what Edifier says is "superb tonal balance" with minimum distortion. Connection to any device comes through included 3.5mm aux cable.
