

Hardware Update for Razer Orochi

Written by Marco Attard
28 November 2012

The Razer Orochi mobile gaming mouse gets a hardware refresh-- the latest version carries "the most precise laser sensor ever outfitted in a gaming mouse" and an improved set of batteries.

According to the company the laser is coupled with a 6400 dpi 4G sensor, all the more accurate to "take out the competition with deadly accuracy."

Wireless connectivity comes through Bluetooth 3.0 and wired use is also available. Powering the mouse are x2 AA batteries promising up to 30 hours of continuous gameplay or 3 months of conventional use.

The Orochi looks ideal as a stocking filler for your more game-oriented customers and should be available now.
