

A Wireless Mouse for Gamers

Written by Marco Attard

Logitech claims the G602 wireless gaming mouse allows for up to 250 hours of "non-stop lag-free wireless gameplay," as well as Delta Zero sensor technology for more precise boss domination.

"When you look at the wireless gaming mice out there their primary flaw is the uncertainty of having to interrupt your game to replace batteries," the company says. "We wanted to bring gamers an innovation that would change the face of wireless gaming forever."

As well as record battery life the G602 also features durable design with mechanical switches (rated at 20 million-click lifespan) and 11 programmable controls.

Wireless connectivity comes through USB dongle.

To accompany the gaming mouse Logitech also launches a pair of "optimal" surfaces-- the G440 hard gaming mousepad (in low-friction polypropylene) and the G240 cloth mousepad (features a heat-treated textile surface).

The gaming mouse and mousepads should be available for retailers by September 2013.
