---

Wacom combines touch-based gestures with stylus input and announces the Bamboo Pad-- a small, slim device handling both multitouch and pressure-sensitive stylus control.

"For people who would love to add a personal signature, a drawing or some handwritten comments to their documents, this new product offers the wonderful feel of a pressure-sensitive Wacom stylus," the company claims.

Available in wired (USB) and wireless options, the Bamboo Pad is compatible with both Mac and Windows PCs, ships in 4 different colours (grey, blue, green and purple) and also works with feel Bamboo styluses.
