---

Accessory maker KickShark takes to Kickstarter to provide customers with a means to add more ports to the new 12-inch MacBook-- the HydraDock, a hub providing an array of no less than 11 ports.

The recently launched new MacBook replaces all ports with a single USB-C adapter.

The 11 ports within the HydraDock include a 4 full-size USB 3.0, two USB-C, HDMI, mini DisplayPort, ethernet, SDXC card slot and 3.5mm jack. One curious omission is Thunderbolt 2.0, which is found in the MacBook Pro.

For use, one simply need to connect the dock to the USB-C connector. Construction is in ABS-C plastic and KickShark promises it can handle "years" of use.

Once the crowdfunding/preorder campaign is over the HydraDock should ship from June 2015.
