

Sonance Designs Outdoor Rock Speakers

Written by Bob Snyder
19 November 2008

Sonance developed three new models for the company's Landscape Series. Two of these UV-resistant speakers, the RK83 and RK63, are outdoor "rock-like" speakers designed to blend into the environment. The RK63 Rock speaker is a 6.5" 2-way, roughly 10 x 11 x 14 inches and is rated for 100w maximum power handling; the 8" 2-way RK83 Rock speaker measures roughly 14 x 15 x 18 inches and is rated for 150W maximum.

The third new product, the SoundHenge Redux is actually an enclosure that looks like a boulder, and is used exclusively with the Sonance Mariner outdoor speakers. The enclosure is available in Granite or Brown finishes and measures 18 x 14 x 13 inches. These can be used with any Sonance Mariner 50 or Mariner 60 range of weather-resistant loudspeakers, in a stereo-pair, or single stereo speaker configuration.
