

Razer reveals a refresh of the Mamba gaming mouse at E3 2015 with two versions (one wired/wireless and a wired Tournament Edition) featuring Chroma lighting, 16000 DPI sensor and 9 programmable buttons.

Both versions carry the same 16000 DPI sensors, and 9 buttons spread across two thumb buttons, two index finger and a tiltable scroll wheel. Razer claims the wireless version offers up to 20 hours of "continuous gaming" on a single charge, while the Tournament Edition includes a braided cable.

A new Mamba feature is "Adjustable Click Force Technology," a means to "allows gamers to freely adjust the level of click force needed to activate the left and right mouse buttons." In other words, users can choose between 14 different click "feels" to suit particular games.

Another more distinct feature is, of course, lighting-- users can choose from up to 16.8 million colours and a variety of effects through the Razer Synapse configuration, and can even synch lighting and colours with other Chroma-enabled Razer devices.

The Razer Mamba should hit the market on Q3 2015.
