

Logitech Case Bloks iPad Damage

Written by Marco Attard

Logitech reveals a set of first products following the ["Logi" rebrand](#) -- the Blok iPad Air 2 case family, one consisting of the self descriptive Blok Protective Shell, Protective Case and Protective Keyboard Case.

Blok cases feature square corners and construction in "unique extra-absorbent polymers" to add further support against damage. Thus the company claims the cases can withstand drops of up to 1.8m on surfaces as hard as concrete.

The Protective Shell is the most basic offering in the Blok portfolio, being a protective shell with a built-in screen protector. The Protective Case is more or less identical, but adds a kickstand with a 50-degree viewing angle.

The final Blok product is the Protective Keyboard Case, an all-in-one case turning the iPad Air 2 into a Surface-style tablet complete with a built-in kickstand and wireless attachable or detachable keyboard.

Logitech says the Blok iPad cases will be available in select European markets from August 2015.
