

The LG Rolly Keyboard

Written by Marco Attard
02 September 2015

Customers wanting a portable full-size keyboard might be in luck with the LG Rolly Keyboard (KBB-700), a self-descriptive device users can roll up into a "stick" for easy carrying in pockets or bags.

The Rolly Keyboard features a 17mm key pitch (most desktop keyboards have 18mm pitch) with "satisfying" tactile feedback. Construction is in polycarbonate and ABS plastic, and a pair of foldable arms smartphones and tablets in an upright position.

Connectivity comes through Bluetooth 3.0, with simultaneous pairing with up to 2 devices. A single AAA battery powers the keyboard for 3 months of "average" use, at least according to LG.

The Rolly Keyboard debuts at IFA 2015 before launch in European markets from Q4 2015.
