SteelSeries launches the Rival 100-- a 6-button optical gaming mouse the company claims "brings unmatched performance, at an unrivalled price" with 40% higher tracking accuracy.

"We determined early-on that we weren't going to sacrifice anything when designing the Rival 100," the company adds. "In fact, it was our goal to develop a multi-button gaming mouse, with features and performance beyond any similarly-priced mouse."

It features customisable Prism RGB lighting, ambidextrous "premium build" and 30 million click rated button switches. A PixArt optical sensors promises 1:1 tracking accuracy, while SteelSeries Engine software allows users to map each button to custom game controls, adjust sensor sensitivity and create personalised configurations.

The Rival 100 is available now.
