

Cooler Master Intros MasterKeys Pro Keyboards

Written by Marco Attard
17 March 2016

Cooler Master announces a pair of minimalist RGB-lit mechanical keyboards-- the full-size MasterKeys Pro L and the compact Pro S, both featuring Cherry MX keyswitches and "brilliant" RGB illumination.

The two keyboards offer multiple lighting modes, with responsive presets including colour wave and breathing, among others. Cooler Master says the built-in LEDs can radiate up to 16.7 million colours, and users can customise the lighting through included software.

The software also allows for on-the-fly macros and user profiles, while the actual keyboards come in a choice of either red, brown or blue switches according to customer tactile preference.

The MasterKeys Pro L is available now, with the Pro S to follow by the beginning of April.
