

G.Skill Ships Ripjaws KM570 MX Keyboard

Written by Marco Attard
27 October 2016

G.Skill announces the Ripjaws KM570 MX-- a "fully customisable, software-less keyboard designed for pure gaming experience," first revealed back at Computex 2016.

Available with a choice of either Cherry MX red, brown or blue switches, the keyboard offers all features demanded by enthusiast customers, such as built-in macro storage, macro recall switch, dedicated media keys and function keys doubling for more via modifier combo. Lighting is also included, if solely in a red colour, but it offers 7 preset patterns and per-key customisation.

Other popular gaming keyboard features are n-key rollover, 100% anti-ghosting and a default 1000Hz polling rate. The actual hardware measures 446.5 x 158.8 x 45.5mm and weighs 1.25kg, with a contoured curve for comfortable typing. Connectivity comes via 2m braided USB cable.

The Ripjaws KM570 MX is available now.
