---

The Arc Hub by Bourge Design is a 7-in-1 USB-C hub solution-- with x2 USB-C ports with pass-through charging, x2 USB 3.0 ports, x1 HDMI port, x1 MiniDisplay Port and an SD card reader.

Built in aluminium, the puck-shaped device features chamfered edges and is covered in convex glass, making it an ideal companion for high-end USB-C laptops such as the latest MacBook Pro models. The HDMI port supports 4K signals, while the two USB-C ports support USB-C Gen 2 (Thunderbolt 3) as well as transfer speeds reaching up to 115Mbps.

The company promises the hub does not fall prey to the quality issues affecting similar USB-C devices, since it is supposedly built with high-quality parts and was subjected to extensive stress tests combining SD card and HDD file transfers, external monitors and the charging of multiple devices.

The Arc Hub ships from January 2016.
