

Griffin Adds to BreakSafe Cables

Written by Marco Attard
09 January 2017

Griffin expands the BreakSafe magnetic USB-C cable line at CES 2017, with additions including the Hi-Power Magnetic USB-C Breakaway Cable, USB Breakaway Adapter, Car Charger, and Wall Charger.

First introduced back in January 2016, the BreakSafe series features patented MagSafe-style quick-release magnetic connectors, if with the addition of a USB-C connector. As such, the Hi-Power Breakaway Cable is an update featuring 100W power capability for use with the MacBook Pro, while the USB Breakaway Adapter adds BreakSafe capabilities to any USB-A device.

The Car Charger and Wall Charger are self-explanatory products, and are designed for USB devices. Both can deliver up to 15W of power to a wide range of products.

"Last year at CES 2016, our acclaimed BreakSafe Magnetic USB-C Power Cable stole the show with its innovation and Type-C support," the company says. "We're proud to continue that legacy by extending the BreakSafe experience to more audiences beyond USB-C. Now, whether users are at their laptops or on the go, they get the safety that comes from a magnetic breakaway cable on any device."

The BreakSafe Breakaway Adapter hits the market on Q1 2017, with the Hi-Power Breakaway Cable, Car Charger and Wall Charger to follow on Q2 2017.
