Kanex announces the availability of the MultiSync Foldable Travel Keyboard-- a universal accessory able to switch between up to 4 devices.

The keyboard features an ergonomic V-shape layout with a foldable and compact design, making it ideal for traveling customers. It uses Bluetooth 3.0 connectivity, is compatible with iOS, Android and Windows devices and carries a lithium-ion battery promising "hours" of typing on a single charge.

Recharging comes through included micro USB cable. An integrated LED indicator lets one know when it's time to charge, with red meaning time is up, green meaning it is charged and blue meaning it is connected to Bluetooth.

The MultiSync Foldable Travel Keyboard is shipping now.
