

The Logitech G Pro Tenkeyless Gaming Keyboard

Written by Marco Attard
09 March 2017

Logitech presents a gaming keyboard "designed for eSports professionals"-- the G Pro, a mechanical number the company claims is engineered for "extreme performance."

The minimalist black keyboard promises "everything you need, and nothing you don't," with Logitech-designed Romer-G keyswitches offering quiet action with a 1.5mm actuation point. It is tenkeyless for more mouse room, and has 26-key rollover together with function key macros. A Game Mode (activated via LGS software) disables all keys other than those required by the game in question.

It measures 153 x 34 x 14mm, weighs 980g and includes a detachable 1.8m micro-USB cable with reinforced connector. Rubber feet keep the keyboard in place, and the rake is adjustable from zero to 4 to 8 degrees.

The G Pro keyboard is shipping now.
