Accessory maker Satechi announces the Type-C Pro Hub-- a means for customers to add 7 more ports to USB-C enabled notebooks such as the 2016 MacBook Pro.

The Pro Hub is similar to the first [Satechi Type-C Hub](#) , but adds two Thunderbolt 3 dongles taking up both ports on either side of the latest MacBook Pro. Once plugged into the notebook the hub provides access to a passthrough Thunderbolt 3, USB-C port, HDMI and two USB 3.0 ports, as well as SD and microSD card readers.

The Thunderbolt 3 port allows data transfers of up to 40Gbps together with passthrough charging for both 13-inch (61W) and 15-inch (87W) MacBook Pro models. The HDMI port allows 1080p video output at 60Hz or 4K video at 30Hz, while the USB 3.0 and USB-C ports offer transfer speeds reaching 5GB/s.

The Type-C Pro Hub is available now with a brushed aluminium finish in either silver or space gray colours.
