

Elgato Intros Thunderbolt 3 Dock

Written by Marco Attard
31 May 2017

Elgato announces the Thunderbolt 3 Dock-- a means for customers to add more ports to the 13- and 15-inch MacBook Pro, as well as up to 85W of power to charge the notebook together with displays and accessories.

In total the dock offers three USB 3.0 ports, gigabit ethernet port, two Thunderbolt USB-C ports, DisplayPort with DisplayPort 1.2 support, 3.5mm headphone jack and 3.5mm microphone input jack. It handles either one 5K (5120 x 2880 resolution) display at 60Hz via Thunderbolt 3 port or two 4K (4096 x 2160) displays simultaneously at 60Hz using the DisplayPort and Thunderbolt 3 port.

USB-C accessories get up to 15W of power, while the USB-A ports can charge either an iPhone or iPad at full speed.

The Elgato Thunderbolt 3 Dock ships from June 2017 in a package complete with a 50cm Thunderbolt 3 cable.
