

Promise Intros TD-300 Dock

Written by Marco Attard
29 November 2017

Promise Technology launches the TD-300-- a Thunderbolt 3 dock designed for use with the latest MacBook Pro models with both USB-C and Thunderbolt 3 offering a variety of ports.

The dock features x5 USB 3.0 ports (x3 back, x2 front), x2 Thunderbolt 3 ports, ethernet port, audio in/out port and an HDMI 2.0 port. As such, it allows the connection of a pair of 4K displays (or one 5K display), device charging, Thunderbolt 3 HDD daisy-chaining, USB device connection and the transfer of SD card content, all from a single connection.

In addition it has transfer speeds of 40GB/s and delivers up to 60W of power when charging a MacBook Pro.

"As part of our mission to offer solutions that are optimised for rich media workflows, we're constantly expanding our portfolio of innovative solutions that harness the latest technology," the company says. "The addition of a Thunderbolt 3 dock brings a new level of efficiency and flexibility to creative professionals. Laptops can be charged at the fastest speeds possible, images from DSLR cameras are easily transferred, peripherals such as hard drives and monitors can be daisy-chained for increased productivity, 4K video can be sent to multiple displays, and more. The possibilities are truly endless."

The TD-300 is available now.
