

Razer Presents Raiju Mobile Controller

Written by Frederick Douglas
18 December 2018

Customers wanting a game controller for Android smartphones get a Razer option-- the Raiju Mobile comes complete with a rotating stand, allowing one to slot in their handset and play games with console-style controls.

As the name might suggest, the Raiju Mobile is based on the Raiju, a PS4 controller from the company. It features the same design, with 4 re-mappable "mecha-tactile action" buttons, a hair trigger mode for rapid fire and a dedicated mode switch button for switching connectivity modes and paired devices.

Smartphones connect with the controller either via Bluetooth or USB-C, and the mount tilts by up to 60 degree to provide an optimum viewing position. Battery life reaches up to 23 hours on a single charge. Razer says the controller is compatible with a number of popular games, including Vainglory, Lineage 2 and Gear Club, among others.

The Razer Raiju Mobile ships on Q1 2018.
