Memory and gaming peripheral maker G.Skill announces a compact tenkeyless mechanical keyboard aimed at both professionals and gaming enthusiasts-- the KM360, featuring Cherry MX keyswitches and wear-proof ABS double injection keycaps.

The KM360 carries Cherry MX Red linear keyswitches (and a Cherry MX Black for the space key) offering 2mm key actuation and a 50 million keystroke rating. The ABS double injection keycaps promise the lettering does not fade or wear from long term use, as well as a smoother feel compared to traditional printed or laser-etched keypads. A solid aluminium top-plate adds durability and stability.

The keyboard includes white LED backlighting customers can adjust to 5 brightness levels (0%/25%/50%/75%/100%). Connectivity comes through a detachable braided USB-C cable, allowing for easy replacement and portability.
