

Logitech G, the Logitech gaming accessory brand, launches the G203 Lightsync-- a gaming mouse promising "gaming-grade" performance within a classic design with an affordable pricetag.

The G203 Lightsync features a time-tested 6-button configuration, and is ready to use out-of-the-box. Customers can further configure it through simplify and customise game commands through Logitech G Hub software. The optical sensor offers up to 8000 DPI sensitivity, while the built-in RGB lighting has a palette of 16.8 million colours and different brightness levels for a "rainbow" colour wave lighting effect.

The mouse also has a 1000Hz polling rate to ensure ultra-fast response times from mouse to screen. The buttons use metal spring tensioning, ensuring they deliver "exceptional" click feel, response and consistency.

The G203 Lightsync mouse ships from May 2020 in either black or white versions.
