Innergie announces 2 new universal power adapters for its mCube series, both coming in compact sizes.

The mCube Slim 95 handles up to 95W (110W peak) of power output in, as the name suggests, a slim form factor. It can charge laptops as well as any device with a 10W USB port (such as tablets, ebook readers, smartphones and mp3 players). It is compatible with a large number of laptop brands (between 18-21 volts) through the included x9 laptop tips, including Acer, Asus, Compaq, Dell, Gateway, HP and more.

It also carries built-in protection against unstable voltage and RTCA aviation-safe certification.

Meanwhile the mCube Mini 90 is an in-vehicle charger the company describes as one of the smallest on the market-- allowing users to charge their laptops and mobile devices on either cars or planes. Power outputs come in 90W for laptops and USB 10W.

It is RTCA aviation certified and UL2089 certified for car usage.

Innergie says both models will be available from May 2011.
