Amped launches what it claims is the "most powerful, long range" indoor wifi solution-- the R20000G dual band router, ideal for use in either large homes or offices.

An upgrade of the earlier R10000G router, the R20000G covers an area of up to 930 square metres using dual 2.4GHz and 5GHz amplifiers to ensure unbroken wifi signals.

Boosting signals further are dual 5dBI detachable antennas and an internal processor reaching 620MHz speeds.

It features x5 gigabit networking ports and a USB 2.0 port for adding networked storage.
