TRENDnet launches the 500Mbps TPL-403E2K Compact Powerline AV Adapter Kit-- the smallest powerline kit from the company yet, shipping with two TPL-406E adapters.

The TPL-406E is 50% smaller than the average 500Mbps adapter, TRENDnet claims.

As a powerline product, the TPL-403E2K uses existing electrical lines to connect devices to the internet. Multiple TRENDnet adapters network automatically to each other using a secure encrypted signal, with no CD installation required.

Embedded power saving technology lowers power consumption in standby mode, while a "Sync" button changes existing encryption keys.

The system handles up to x8 adapters without the need to run new cabling.
