Reducing Fax Machine Costs

Written by Marco Attard

NextIX Systems says its EcoFax is the smallest eco-friendly fax server available-- providing a paperless faxing solution (complete with telephony capabilities) for home offices and small businesses.

Being low power (consuming only 12V) as well as low cost, it eliminates fax machine paper and ink costs by e-faxing to email, and allowing users to stoore documents on their computer desktops or online.

Via browser users can also send faxes to up to x5 numbers simultaneously.

It also has PBX functions-- including caller ID, call hold, call transfer, call waiting and 3 way conferencing, as well as forwarding voice mails as emails.

Its interfaces are 1 telephone line, 1 telephone set and 2x RJ 45 network connections.
