---

Fractal Design presents an aesthetic update on the Celsius AiO liquid cooling systems-- the Celsius S24 Blackout and S36 Blackout AiO coolers feature a somber all-black look while maintaining the same cooling modes and capabilities of previous versions.

The Blackout versions of the Celsius AiO coolers include the same fan and pump speed management as the regular Celsius, using either motherboard PWM output or a temperature-controlled automatic mode. The addition of Dynamic X2 GP-12 PWM Black Edition fans allows for the darker look while promising minimum noise output, with speed adjustment range from 500 to 2000RPM.

An integrated fan hub with concealed cable routing simplifies cable management for a clean installation, while the radiator fittings use standard G 1/4-inch thread for maximum compatibility and expandability with standard components. Thus, customers can easily integrate a GPU block of choice to eliminate the graphics card fans.

The Blackout versions of the Celsius AiO coolers are available now.
