

ScanSnap Scans to Mobiles, Cloud

Written by Marco Attard
27 June 2012

Fujitsu subsidiary PFU launches the ScanSnap S1300i-- now able transfer scans directly to either mobile devices or cloud storage services.

The ScanSnap Folder application connector streamlines scanning to 3rd party applications, sending scans to wifi-connected Android and iOS devices, as well as services such as Evernote, Google Docs, Dropbox, SuraSync and Salesforce.

The scanner features scanning speeds of up to 12 pages per minute (A4, colour, 150 dpi) or 24 images in duplex mode. It features a number of automatic functions, including "intelligent" indexing and cropping. Power consumption is also efficient, with the scanner switching to "power-off" mode after 4 hours in standby mode.

Users of previous ScanSnap models (S1500/S1500M/S1300/S1100) can also get an update on their scanner software online.
