Customers wanting to give PCs a splash of colour can do so through RAM, as G.Skill launches Trident Z series DDR 4 memory modules in a choice 5 colour options.

Previously featuring a silver and black brushed aluminium heatspreader with a red top-bar highlight, Trident Z modules are now come in colour schemes including a black brushed aluminium body paired with orange, yellow or white top-bar or a silver brushed aluminium body with white or black top-bar.

According to the company the colour schemes pair "exceedingly well" with modern motherboards based on the X99 and X170 chipsets.

Multi-coloured Trident Z memory modules are available in 16, 32, 64 and 128GB capacities from end May 2016.
