

Geil Intros EVO Spear DDR4 Memory Kits

Written by Marco Attard
17 August 2017

Geil announces the EVO Spear memory series-- with kits aimed at Intel and AMD Ryzen machines, all designed for gamers and enthusiasts wanting a cost-effective upgrades.

The company says EVO Spear series RAM is optimised for Intel Core X, i7 and i5 processors, including the Z200 and X299 series chipsets. On the other hand the AMD Edition sticks are compatible with Ryzen 7 and 5 processors, and AM4 motherboards. The AMD Edition memory kits have an AMD Ryzen logo on the packaging and modules, while the Intel sticks are nondescript.

Capacities range from 16 to 64GB in both dual and quad channel kits. Operating frequency reaches 3466MHz in the Intel sets, while the AMD Edition peaks at 3200MHz. CAS ratings vary by SKU, ranging from CL15 to CL17m. Standard height heatsinks promise "zero mechanical interference," and are available only in a stealth black colour.

In total Geil has over 50 EVO Spear kits, as divided by capacity (2x4 GB, 2x8 GB, 2x16 GB, 4x4GB, 4x8GB, 4x16GB).
