

HyperX Adds to Predator Memory Line

Written by Alice Marshall
24 April 2019

Kingston gaming division HyperX announces a pair of additions to the Predator DDR4 memory kit line in 4266 and 4600Mhz frequency versions-- both available in 8GB modules in kits of two.

The kits ship with a black aluminium heat spreader and a black PCB to complement the look of the latest PC builds. Predator DDR4 modules offer speeds up to 4600MHz with latencies from CL12-CL19, and include XMP to allow for further overclocking. HyperX adds the certified XMP profiles are optimised for the the latest Intel processors, and are compatible with many AMD chipsets.

“The HyperX team is excited to offer Predator DDR4 for the next generation of PC enthusiasts who want the best performance from their systems,” the company says.” As HyperX continues to support the world of gaming and esports, the community sees us as a trusted leader for high speed memory in the gaming hardware industry.”
