

USB 3.0 for Kingston's 2011

Written by Marco Attard
12 January 2011

Kingston plans to develop a full range of USB 3.0 flash drive products this year, following its CES showings.

The company should release its fastest USB 3.0 device yet, the DataTraveler HyperX 3.0. It is part of Kingston's HyperXperience line of high-performance flash products.

The line will also include SSDs, USBs and cards complementing HyperX enthusiast memory modules.

A second generation of the DataTraveler Ultimate 3.0 (the company's first USB 3.0 flash drive using a SATA bridge chip) will also be available in 16-, 32- and 64GB capacities.

Mainstream consumers will also be getting an entry-level flash drive going with USB 3.0 systems.
