

A Laptop for Linux Gamers

Written by Marco Attard
21 November 2012

With Steam soon available for the Linux operating system, some gamers might want an appropriate laptop-- such as the Bonobo Extreme from open-source machine builder System76.

The base Bonobo Extreme model has a 17.3" display and carries an Intel i7 3630Qm 2.4GHz processor, Nvidia GeForce GTX 670MX 3GB GPU, 8GB DDR3 RAM, 500GB 7200 RPM HDD, 8x DVD drive and an 8-cell battery.

The keyboard is backlit (with a variety of colours) and the trackpad comes from Synaptics.

Ports include HDMI, DisplayPort, ethernet, eSATA/USB 2.0 combo, USB 3.0 and S/PDIF out.
