The 2-in-1 WorkPlay Tablet

Written by Marco Attard

InZero Systems claims to solve security issues caused by using the same device for work and play with the WorkPlay Tablet, a device with two hardware-separated operating systems.

According to the company the OS pair does not share resources allowing cross-contamination, meaning malware operating in one OS cannot access the other. Bearing self-descriptive "WorkZone and "PlayZone" names, each OS is Android-based and can be autonomously managed.

A Zone can also feature firmware-embedded management for maximum IT administrative control. Switching between Zones involves touching a switch icon, an operation supposedly taking only a few seconds.

Further security features include AES256 encryption and secure boot.

InZero gives no further hardware details on the device, although it does look like a fairly generic 10-inch tablet.
