Toshiba launches the Satellite Radius 11-- a Windows laptop with an 11.6-inch touchscreen and a 360-degree hinge allowing one to push the screen until it is back-to-back with the keyboard, turning it into a tablet.

Described as "ultra mobile, super light," the notebook features either Intel Celeron or Pentium processors, as well as up to 4GB RAM, 32GB SSD or 500GB HDD, 1366x768 resolution display and Intel HD graphics. Connectivity comes through x2 USB and x1 HDMI ports, while the keyboard is a frameless tile type complete with "large touchpad."

Toshiba says the hinge allows use in 5 different modes-- laptop, tablet, tabletop, presentation and audience.

The Satellite Radius 11 is available now.
