

Razer Gaming Laptops Arrive in Europe

Written by Marco Attard
03 December 2015

Razer announces the European rollout of its high-performance PCs, starting from December 2015 in the Nordics with the "award winning" 14-inch Razer Blade laptop.

The Razer Blade offers an Intel Core i7-4720HQ processor, Nvidia GeForce GTX 970M GPU (3GB), 8/16GB RAM, 256/512GB of SSD storage and a backlit anti-ghosting keyboard (with either Nordic or US layout) inside a slim (17.9mm thick) aluminium chassis. Customers also get an option of either IGZO QHD+ touchscreen or non-touch HD IPS display.

"The demand in Europe for the world's thinnest, most powerful and portable laptop for gamers has inspired us every waking moment since we launched the Razer Blade 3 years ago," the company says. "We are happy to say that everything is finally in place to offer Razer's high-performance gaming systems throughout EU in 2016, with the feature sets and product support that gamers want, need and deserve."
