15 September 2016

Dell announces an update of the XPS 13 notebook-- one featuring Intel 7th generation "Kaby Lake" CPUs together with a larger battery and a new colour option, Rose Gold.

As the name might suggest the XPS 13 is a 13-inch notebook described by the company as "built for premium performance, mobility and visual fidelity." It features a "virtually borderless" InfinityEdge display and comes with a choice of either Core i5 or Core i7 CPU, as well as 8GB RAM and 256GB SSD storage. Wifi also gets an update with Killer 1535 Wireless-AC technology, while a 60WHr promises up to 13 hours of use on a single charge.

Construction is in machined aluminium, carbon fibre and Corning Gorilla glass for additional toughness. The OS of choice is either Windows 10 or, in the case of the Developer Edition, Ubuntu 16.04 LTS.

Also announced by the company are updates on the Inspiron 15 and 17 5000 laptops-- both offering Kaby Lake processors, optional discrete graphics and more colour options (Sparkling White, Midnight Blue, Fog Night, Matte Gray, Black, Bali Blue, Tango Red, Cosmic Purple).
