

Infocus Kangaroo Becomes a Notebook

Written by Marco Attard
15 September 2016

InFocus announces a different take on the [Kangaroo mini-PC concept](#) -- the Kangaroo Notebook, an 11.6-inch laptop powered by interchangeable mini-PC modules.

Each mini-PC module is a self-contained Windows 10 PC, and the concept behind the Kangaroo Notebook has users switching between different modules dedicated to different uses. In fact, InFocus insists on the concept so much the package contains 2 modules, each featuring Windows 10, an Intel Z8350 Cherry Trail CPU, 2GB RAM and 32GB storage together with the laptop dock.

As for the dock, it includes everything a laptop requires, including keyboard, Synaptics ClickPad, battery, webcam, ports, microphone and speakers.

“With Kangaroo Notebook, we put the power to create private, individualised computing experiences directly into the hands of our customers,” the company says. “The modular design of this new mobile computing bundle gives our customers a different level of flexibility and control over how they want to manage personal computing, particularly in the home.”

The Kangaroo Notebook ships from mid-October 2016.
