Samsung announces a Gold Edition of its Microsoft Surface rival, the Galaxy TabPro S-- an upgrade featuring an improved battery together with more RAM and storage, all inside a gold-coloured case.

The TabPro S Gold Edition retains the same 12-inch AMOLED 1920 x 1080 resolution display, 2.2 GHz Intel M3 CPU and 5MP front- and rear-facing cameras, but now the RAM is up to 8GB while storage comes via 256GB SSD. As for the battery, Samsung says it powers up to 10.5 hours of video playback on a single charge.

The body is in magnesium alloy, and includes x2 USB-A ports for peripherals, HDMI port for displays and a USB-C port for charging. Also included in the package is a detachable keyboard case (connects via Pogo pin port), while an optional TabPro Pen provides stylus input.

The Galaxy TabPro S Gold Edition is available now.
