Toshiba will present its Qosmio F750 series at IFA 2011-- describing it as the first notebook range with glasses-free 3D and simultaneous 2D/3D content display.

The F750 series uses the integrated webcam to track the user's eye position-- ensuring the 3D effect from the 15.6" display matches their viewing angle.

Audio is not overlooked, with Harman Kardon stereo speakers and Dolby Advanced Audio.

Powering it all is an Intel i7 2630QM processor, together with a nVidia GT540M graphics card.

Also on display at IFA is Toshiba's new high-end gaming notebook, the Qosmio X770-- meeting gamers' demands with nVidia's GTX 560M graphics card and a 3D Blu-ray drive, together with a 17" glasses-free 3D display.
