Acer improves on the C7 Chromebook with the C710-2605-- a laptop with an 11.6-inch display following the Google model with more storage, memory and a bigger battery.

Alongside 4GB of RAM, 500GB HDD and a 5000mAh battery, the Acer Chromebook also carries a 1.1GHz Celeron processor, built-in webcam, x3USB HDMI and VGA ports.

Internet connectivity comes through either 802a/b/g wifi or ethernet LAN.

This being a Chrome OS machine Acer also throws 2 years worth 100GB of cloud-based Google Drive storage.
