---

Corning brings its cover glass products to touch-enabled notebooks with Gorilla Glass NBT, claiming it is designed to "protect touch notebook displays from scratches and other forms of damage."

Gorilla Glass NBT features the same benefits seen in the 3rd Gorilla Glass version, including Native Damage Resistance (NDR) flaw visibility reduction and improved strength retention.

"We are confident that Corning Gorilla Glass NBT will outperform legacy soda-lime glass, delivering eight to 10 times more scratch resistance," the company says. "In fact, for just 1-2% of a notebook's retail price, consumers can now get the best cover glass solution."

Gorilla Glass already appears in notebooks such as the Google Chromebook Pixel, but NBT is the first specifically designed for the market. It should appear in notebooks from leading vendors later this year.
