

Alcatel Reveals One Touch Hero at IFA

Written by Marco Attard
04 September 2013

Alcatel has one flagship device launch at IFA 2013-- the One Touch Hero, a 6-inch Android 4.2 smartphone complete with stylus and a number of intriguing optional accessories.

Accessories seen at the show include a inductive wireless charging cover, a MagicFlip cover (provides notifications via embedded LED), an E Ink cover (provides a low-power eReader display), a Bluetooth miniature headset accessory (similar to the [LG Mini+](#)), a TV Link video adapter and even a pico projector that doubles as a stand.

Meanwhile the included stylus "transforms the phone into a creative enterprise tool," the company claims.

Inside the phone are standard specifications fitting a fairly high-end device-- 1.5GHz quad-core processor, 2GB RAM, 8/16GB internal storage (expandable via microSD) and 13MP rear-/2MP front-facing cameras.

The One Touch Hero will be available from October 2013.
