Sony confirms its smartphone-gaming plans-- not with the speculated "Playstation Phone" handset, but a cross-platform mobile software framework dubbed Playstation Suite.

What this means is an official Playstation store carrying PSONe titles for Android devices-- specifically those with Android 2.3.

The company describes the store as hardware neutral, making software compatible with all sorts of devices. Sony is also starting a "Playstation Certified" hardware licensing program together with a new game development environment.

The PS Suite will also be available on Sony's other big announcement, the NGP handheld console.
