

Biscotti Gets Security, Cloud Features

Written by Marco Attard
28 November 2012

The lovably named [Biscotti TV phone](#) is now more than a simple biscuit-sized VoIP TV phone-- a recent software update adds additional functionality in the shape of MyBiscotti Cloud Services.

The Cloud Services update allows for security applications in the shape of Live Image viewing (collates live images from all connected Biscotti TV cameras) the self-explanatory Time-Lapse Videos functions.

Further additions includes remote monitoring and configuration through any internet-connected device and the MyBiscotti website.

The upgrade is free of charge for all current Biscotti users and should be available in the newest versions of the device.
