

Dell Intros 4K Monitors

Written by Marco Attard
04 December 2013

As the hype over 4K/UHD displays grows, more vendors take on the format-- Dell launches the UltraSharp 32, UltraSharp 24 and 28 Ultra HD monitors, promising "stunning screen clarity" for both consumer and professional customers.

The UltraSharp 32 features a 31.5-inch panel, while the UltraSharp 24 measures 23.8-inch. Being designed for the professional market, both handle resolutions of up to 3840x2160 with full spectrum coverage, major colour standard support (including 99% Adobe RGB) and "ultra-wide" viewing angles.

Connectivity comes through HDMI, DisplayPort, USB 3.0 and a 6-in-1 card reader.

Meanwhile the 28 Ultra HD is aimed at the consumer segment, since Dell claims it is the "most affordable" 4K monitor around. It measures 28-inch and comes with an adjustable stand allowing one to pivot it in portrait mode.

The UltraSharp 32 and 24 monitors will be available from December 2013, and the 28 Ultra HD should hit the market sometime during Q1 2014.
