

3M's Short-throw Projection System

Written by Bob Snyder
19 November 2008

At BETT 2009, 3M will announce its new modular projection system, the SCP716 (has all the attributes as SCP712 modular system plus enhanced features). Features include 2400 lumens brightness, long lamp life of 5000 hours, and DLP BrilliantColour technology

One of the first high-brightness, DLP, super close projectors to enter the market, the SCP717 features DLP Brilliant Color, DVI-D connectivity, an RJ-45 ethernet connection and an integrated wind tunnel design to minimize heat and fan noise.

The extreme off-axis short throw greatly reduces light in the presenter's eyes. The integrated connectivity makes it a tabletop media hub too.

Go [3M Short-Throw or see it at BETT 2009](#)
